

GRAB & GO PROGRAM

What is a SIM Card?

SIM cards contain chips that are inserted into a mobile phone so the user can access the local mobile network to place or receive calls or send texts. This small card contains user information and can be transferred from one mobile phone to the other.

Why Sell SIM Cards?

Selling SIM cards will increase revenue in your store. Customers looking for a new mobile provider or a temporary one while traveling will see the display rack of SIM cards in your store, providing them with a selection of leading carriers in the industry.

Our **Grab & Go Program** allows your customers to grab a SIM card in-store, pair it with a voucher, and complete their mobile activation at home. **Once verified by the carrier you may receive additional commission for such activations.**
